Tyrant SIO™ – Slide-Integrated Optic System

Optic-Native Slide Architecture for Hi-Capa Competition Pistols

Tyrant SIO™ is a slide-integrated, rail-guided optic system engineered as part of the slide architecture.

How the SIO™ System Works

Slide-Integrated Optic Interface

Rear Slide-In Mount Design

Rail-Guided Structural Positioning

Secure Locking Mechanism

Ultra-Low Optic Height

Tighten the set screw.
Designed for Interchangeability

Important: After installing the optic plate, always tighten the set screw completely. The set screw preloads the cross pin to eliminate clearance in the mounting track, ensuring a secure fit and maximum stability.

Structural, Not Additive

SIO™ is not a bolt-on plate system. The optic interface is defined by the slide structure itself, ensuring low optic height, stability, and repeatable alignment under recoil.
